MediBlock

The Medical Blockchain

Inspiration

- Abused drug prescription

- Improving drug verification systems

What it does

- Uses blockchain to make a medical prescription
    - trustworthy
    - authoritative

- Provides an easy way to maintain medical record ledger

How We built it

- Ethereum

- Solidity programming language
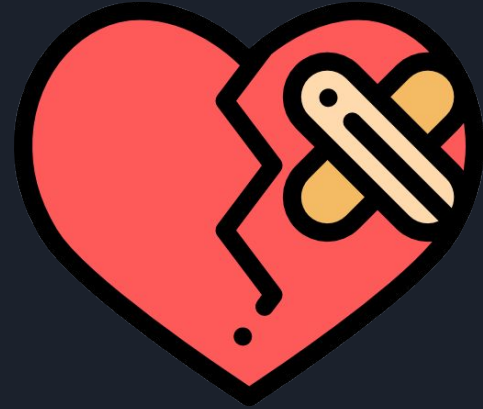

- HTML, CSS
  and millions of node_modules

Challenges We ran into

- Difficult to initial setup

- Not a mature framework

- Limited documentation

- Hard to debug

- Found a bug last night for which we couldn't find a solution yet!

What's next for MediBlock

- Add more entity (insurance company, pharmaceutical company, government, etc)

- Monetizing? (Need a business model)

- Fix the bug….

What We learned

- Blockchain concept can disrupt many areas in real life that are already exist

Thank you!
